The San Francisco Bay is the largest estuarine system along the coast of California. It provides a productive environment composed of marshlands, mudflats, salt production lands, and open water. It supports approximately one hundred different species of fish. It is one of the major resting, feeding and wintering points along the Pacific Flyway.

Protection of the San Francisco Bay is an important issue addressed during debates regarding further water development. All parties agree that the ecosystem of the San Francisco Bay should be protected, though the methods of protection espoused vary widely. This is because of widely differing views on the amount of reliable and useful information regarding the Bay. There are many questions that are being asked:

1. What effect does reduction in fresh water inflow have on the San Francisco Bay?
2. Does tidal influence play a greater role than fresh water inflows in preserving the productivity of the Bay?
3. What effect does local pollution have on the San Francisco Bay?
4. Is the condition of the San Francisco Bay better today than it was twenty years ago?
5. What is the most effective method of providing protections for the San Francisco Bay?

It should be noted that this bibliography is by no means a definitive work on the subject area. It is a modest attempt to focus attention and provide a resource tool to assist in answering these questions, among many others. The Assembly Water, Parks and Wildlife Committee Staff has begun the task of compiling a bibliography, the results of which are contained in this volume.

The publications were divided among twelve different subjects in order to make the bibliography more manageable. Listed at the end of the publication is a summation of the various agencies that have published reports, the office to contact to obtain the publication, and the lending and acquisition policies of the agency. In addition, a listing of libraries will provide you

with other sources at which copies of some or all of the documents may be obtained. Should you be aware of publications that are not listed in this volume please send the information to the Assembly Committee on Water, Parks and Wildlife, State Capitol, Room 2003, Sacramento, CA 95814.

The Committee thanks the many individuals who assisted in the compilation of this bibliography. Jerry Giefer of the Water Resources Center Archives and Bill Davoren of the San Francisco Bay Institute provided valuable assistance and guidance.

A handwritten signature in dark ink, appearing to read "Jim Costa". The signature is stylized with a large "J" and "C".
